A LESSON DESIGN FRAMEWORK BY DR. A.SATTAR AMRI

KUD Lesson Design

Building the framework: ensuring safety in learning design

One objective. Know, Understand, Do. One task that brings them together, and a product that proves learning.

THE DESIGN AT A GLANCE

Why "safety"? No drifting from the learning objective. A swim barrier for teachers. Planning, teaching and assessment, all inside the objective. Assess only what you set out to teach.

HOW A KUD LESSON IS BUILT

1. **Start from the skill.** The skill the lesson must build.
2. **One learning objective.** Broken into Know, Understand, Do.
3. **Success criteria.** Derived from the objective. Students judge their own work.
4. **One productive task.** K, U and D fit together inside it.
5. **Enablers ready.** Enabling activities or explicit teaching for stuck moments. They fill the performance gaps.
6. **Product = evidence.** Assessed against the success criteria. A gap? Revisit the objective.

WRITING THE K, U AND D

K · Know	U · Understand	D · Do
"Students will know..."	*"Students will understand that..."*	*"Students will be able to..."*
Facts. Terms. Key vocabulary.	The big idea. Gives knowledge meaning.	The skill. Visible in the product.

Design with KUD. Plan and run with QuadFlow. Observe with QuadLens.

The KUD Lesson Design Checklist

One objective. Know, Understand, Do. One task. One product that proves it.

Use it to plan a lesson, check a colleague's plan, or reflect on your own design. A companion to QuadFlow and QuadLens.

STEP 1

Objective & KUD

Is it clear what students will know, understand and be able to do?

- [ ] Lesson built around one clear skill
- [ ] One learning objective, written in student-friendly language
- [ ] **K:** the subject knowledge and key vocabulary students need
- [ ] **U:** the big idea, written as "Students will understand that..."
- [ ] **D:** the skill, as an action students can show in the product

STEP 2

Success Criteria

Can students tell what success looks like?

- [ ] Criteria derived from the objective, covering K, U and D
- [ ] Written so students can judge their own work against them
- [ ] Shared before the task starts
- [ ] Revisited during the lesson to keep the objective in view

STEP 3

Task & Enablers

Does one task bring knowledge, understanding and skill together?

- [ ] One productive task that needs K, U and D together, not three separate activities
- [ ] The task produces a visible product
- [ ] Likely stuck points predicted, each with an enabling activity or explicit teaching ready
- [ ] Enablers fill students' performance gaps: given only when students are stuck, then straight back to the task

STEP 4

Product & Assessment

Does the product prove the objective was met?

- [ ] The product shows evidence for every success criterion
- [ ] Assessed against the success criteria: self, peer and teacher
- [ ] Feedback acted on to improve the product
- [ ] Gaps in the evidence lead back to the objective for the next lesson

Safety check: Objective → K, U, D → success criteria → task → product. Every part stays inside the objective, and you assess only what the objective asks for.
