A LESSON FRAMEWORK BY DR. A.SATTAR AMRI · FROM TASK SWITCHING DYNAMICS

QuadFlow

Four stages. One flow: learning.

Keep students hooked on the productive task. Support them only when they get stuck.

THE FOUR STAGES

Learning Agreement
LO · SC · KV · CUT

- Learning objective
- Success criteria
- Key vocabulary
- Common understanding of task
- Activation of schemata
- Planned stuck points

Learning Support
EEA · ET, when stuck

- Enabling exercises and activities
- Explicit teaching
- Audio-visual content
- Given only at the stuck point

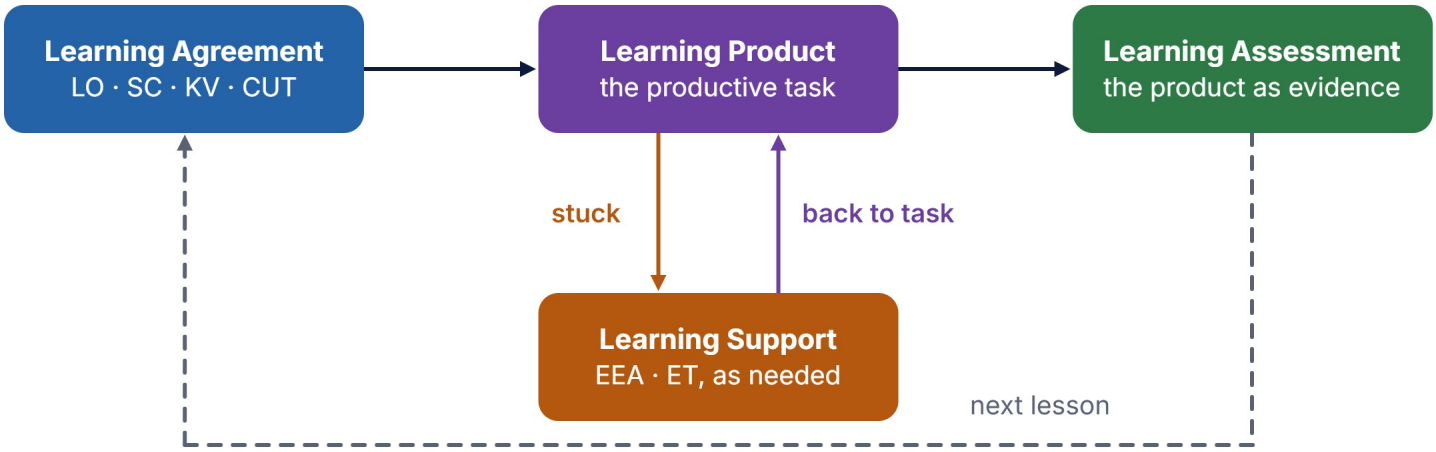

Learning Product
PK + NL → product

- The productive task
- Prior knowledge + new learning
- Real-life scenario
- Authentic audience
- Critical thinking / problem solving

Learning Assessment
SC · Feedback

- Application of success criteria
- Self-assessment
- Peer assessment
- Group assessment
- Feedback and refinement

THE FLOW: HOW A QUADFLOW LESSON RUNS

- Students spend most of the lesson on the productive task.
- A stuck point is the evidence that support is needed.
- The student moves to an enabling exercise or receives explicit teaching, then goes straight back to the task.
- The **Linear model** (Learning Agreement → Learning Support → Learning Product → Learning Assessment) can help novice teachers start, but it has less impact.
- It risks teaching what students already know, and running out of time before the product is finished.
- The **Transitional model** (Learning Agreement → Learning Product ⇄ Learning Support → Learning Assessment) is the target and has more impact: students stay on the product and go to support only when they are stuck.

WOVEN THROUGH EVERY STAGE

Learning Skills: Communication · Collaboration · Critical thinking · Creativity / **Social Emotional Learning (SEL)**

Plan and run with QuadFlow. Observe with QuadLens.

The QuadFlow Lesson Checklist

Keep students hooked on the productive task. Support them only when they get stuck.

Use it to plan a lesson, observe one, or reflect on your own teaching. A companion to QuadLens.

STAGE 1 — Learning Agreement

Do students know what they will learn and what success looks like?

- [ ] Learning objective shared; students restate it in their own words
- [ ] Clear success criteria; students ready to judge their own work against them
- [ ] Key vocabulary taught and used during the task
- [ ] Common understanding of the task: what, how and by when
- [ ] Prior knowledge (schemata) activated before new learning

STAGE 2 — Learning Support

Do students get support when they need it, and only then?

- [ ] Likely stuck points predicted, each with an enabling activity ready
- [ ] Support triggered by stuck points; no re-teaching of what students know
- [ ] Short, discussion-based explicit teaching for those who need it
- [ ] Audio-visual content and models for self-help
- [ ] Straight back to the productive task after support

STAGE 3 — Learning Product

Are students spending most of the lesson on the productive task?

- [ ] Productive task started early; most of the lesson time spent on it
- [ ] Prior knowledge merged with new learning to create a product
- [ ] Real-life scenario and authentic audience
- [ ] Critical thinking or problem solving, not copying
- [ ] Clear signals and routines for short transitions and unbroken focus

STAGE 4 — Learning Assessment

Does the product show what students have learned?

- [ ] Success criteria applied to the product during the work
- [ ] Self, peer and group assessment against the same criteria
- [ ] Specific feedback, acted on to refine the product
- [ ] Product, the evidence of learning, completed by most students within the lesson
- [ ] Today's stuck points used to plan the next lesson

Manage throughout:	Time · Pace · Activity (task, time, strategy: individual, pair, group) · Response · Behaviour · Attention
Woven through every stage:	Learning Skills: Communication · Collaboration · Critical thinking · Creativity / Social Emotional Learning (SEL)
